

Product: Lignum et Lapis
Manufacturer: Arclinea
Designer: Antonio Citterio
Architonic ID: 2053078

Description:

The main players of Lignum et Lapis are stone and wood: materials that enhance exclusive design and project creativity. Formal and technological research lies at the basis of islands, worktops and workbenches in stone: true physical industrial sculptures. The new door shows off the fineness of natural wood with its distinctive stave design in variable widths and distances. It is available in the finishes larch, mahogany, Nordic oak and in lacquered colours from the range.

The “industrial sculpture” island is a monolith in stone partnered with Eulithe (lightness) and aluminium (mechanical resistance) with supporting elements (side and end panels) that act as a base. The worktops feature drip guard, shaped snack bar areas and built-in stone sinks and they have been designed to accommodate worktops and stainless steel sinks. The wall-mounted base units have wooden jointed-stave or lacquered doors and Greca handle in stainless steel. Two different kinds of island: single snack (with built-in stone sink) or double snack (with stainless steel sink).

Island in Gra Bla marble with doors and units in mahogany, stainless steel Olimpia stools with wooden seat. On the left-hand wall, floor to ceiling Wine Rack. The ceiling-mounted unit in stainless steel makes the most of the space over the islands and peninsulas. It comprises a double shelf in stainless steel with adjustable tie-rods and built-in lighting system, food warmer and indoor

miniature greenhouse. Extraction is ceiling mounted. The double shelf are combined with integrated hood and ceiling-mounted extraction unit.
